AJACS PHOTO ENFORCEMENT

AUGUST 5, 2011

TECHNICAL ADVISORY COUNCIL

AJACS Photo Enforcement

- The CMS will designate the arraignment date and notice the vendor once the case is successfully created. This will be a change to the existing process where the vendor designates the date prior to case creation. Going forward the vendor will wait for the case created message before the complaint is sent to the defendant.

  - This will prevent rescheduling the arraignment if the date is invalid.
  - This will also prevent the defendant from appearing with the court before the case is in the CMS.

AJACS Photo Enforcement

- Systemic notification to the vendor if an event that equates to an acknowledgment occurs.

- The ability to reverse an acknowledgment if an acknowledgment was set in error.

- Systemic Failure to Appear monitoring.

  - If an acknowledgment did not occur the system will continue the arraignment and notify the vendor.

  - If an acknowledgment did occur a systemic default will occur.

AJACS Photo Enforcement

- The ability to systemically notify the vendor of payments, dispositions, DDS completions and hearings. This is configurable so that the court may turn notifications on or off based on contractual obligations.

- The vendor will generate a message to the CMS when they seek process service. The message will include the date service was initiated and the cost of service.

  - This information will be recorded so that the CMS may properly impose the process service fee if a valid affidavit of service was filed.

AJACS Photo Enforcement

- Systemic validation of affidavit of service filings to determine if they meet the criteria for imposing a process service fee. If yes, then the system will systemically impose.

- Systemic processing of motions to dismiss that are filed in response to a non-driver affidavit. The system will validate the record and then either auto dismiss or queue the record for user review. Courts have the ability to designate through a configuration setting whether they auto dismiss or queue.

- Systemic dismissal review once a PE case has gone through the full life of a case without an acknowledgment. The system will validate the record and then either auto dismiss or queue the record for user review. Courts have the ability to designate through a configuration setting whether they auto dismiss or queue.
